Recommended Weekly Maintenance: 10,000 gallon pool Adjust amounts based on your gallons.

1. Add water if needed
2. Vacuum the pool if necessary
3. Empty skimmer basket/s if they are in
4. Empty debris from pump basket & lube pump lid O'ring if needed
5. Check filter pressure gauge, if pressure has risen 3 - 5 lbs. above clean beginning pressure, backwash & rinse the filter if it's a Sand Filter / clean cartridges if Cartridge Filter / recharge if D.E. Filter
6. Check chlorinator and add ProTeam 3" High Tech Tabs if needed, should have 3-4
7. Test pool water... maintain these levels; chlorine 1 - 3 ppm, pH 7.4 - 7.8, alkalinity 80 -120 ppm, calcium hardness 200 – 250 ppm and cyanuric acid (chlorine stabilizer/ UV shield) 30 - 50 ppm
If any of these are not in good range, adjust to bring into proper balance
8. Shock the pool using 1bag ProTeam Power 73 fast dissolving granular Chlorine Shock **or** 1 gallon premium liquid Chlorine Shock
- *** Pools with Nature2 systems should maintain .6 to 1 ppm chlorine and shock with ProTeam Shock & Swim Non-chlorine oxidizer.**
9. Add 4 oz. ProTeam Microfloc non foaming algae preventer.
10. Every other week or when adding water, add 4 oz. of ProTeam Metal Magic
11. Add ProTeam Alkalinity Up if needed, to maintain 110 – 120 ppm
12. After all chemicals are added clean the tile line with ProTeam Tile & Vinyl Cleaner, brush the pool stairs, walls & floor to main drain
13. Skim pool surface if needed
14. Wait 1 hour before using the pool if shocking with chlorine, 15 minutes if using Shock & Swim non-chlorine shock or do the above procedure after pool use is done for the day

*Once a month bring a water sample to All Seasons Pool & Spa to have all base chemicals tested

Enjoy Your Pool! 😊
